                                                                              В
                                                                                                                                                                                                                                                                                             CC signal transducing component causing beta receptor dimerization, the component transducing component of the receptor transducing component of the receptor component of the extracellular domain of the first beta signal cC (sR-alpha) and the extracellular domain of the first beta signal cC (sR-alpha) and the extracellular domain of the first beta signal cC (sransducing component of the cytokine receptor (beta-1) are combined to cf form heterodimers (sR-alpha:beta-1) that act as antagonist to the cc cytokine by binding the cytokine to form a non-functional complex. The cC components are shared by cytokines such as the CNTF (ciliary neurotrophic factor) family of cytokines. The invention provides the cc basis for the development of IL-6 antagonists, as they show that if, in cc consisting of the ligand, it salpha receptor and its beta-1 receptor component, can be formed, it will effectively block the action of the cligand. Effective antagonists of IL-6 or CNTF consist of heterodimers components of their receptors and the extracellular domains of the alpha specificity determining cc the cresultant heterodimers, function as high-affinity traps, rendering the cytokine inaccessbile to form a signal transducing complex with the continue membrane-bound forms of their receptor. The nucleic acids and cc disorders such as osteoporosis and primary and secondary effects of cancer including multiple myeloma or cachexia.
                                                                                                                                                             Query Match

The invertion concerns production of antagonists to any cytokine that cutilizes an alpha specificity determining component, which when combined CC with the cytokine, binds to a first beta signal transducing component to signal transducing component causing beta receptor dimerization, the soluble alpha specificity determining component of the receptor (sR-alpha) and the extracellular domain of the first beta signal transducing component of the cytokine receptor (beta-1) are combined to CC transducing component of the cytokine receptor (beta-1) are combined to CC form heterodimers (sR-alpha:beta-1) that act as antagonist to the CC cytokine by binding the cytokine receptor (beta-1) are combined to CC receptor components are shared by cytokines such as the CNTF (ciliary neurotrophic factor) family of cytokines such as the CNTF (ciliary neurotrophic factor) family of cytokines. The invention provides the basis for the development of IL-6 antagonists, as they show that if, in CC component, can be formed, it will effectively block the action of the ligand, its alpha recepotr and its beta-1 receptor CC component, can be formed, it will effectively block the action of the CC of the extracellular domains of the alpha specificity determining CC components of their receptors and the extracellular domain of gpl30.

The resultant heterodimers, function as high-affinity traps, rendering CC native membrane-bound forms of their receptor. The nurleic acids and complex with the component contents and the extracellular domain of gpl30.
                                                        native membrane-bound forms of their receptor. The nucleic acids and polypeptides are useful for treating cytokine-related diseases or disorders such as osteoporosis and primary and secondary effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-AUG-2000 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chain and the hinge region and CH2 and CH3 constant domains of human IgG1. The fusion was expressed from clone pLB001 (see AAT97439) in COS-7 cells, and used to generate murine anti-human gc specific monoclonal antibodies (MAbs), including CP.BB produced by hybridoma ATCC HB 12107. The invention provides compositions and methods for inhibiting cytokine signalling using gc chain blocking agents for the treatment of immunological diseases such as myasthenia gravis, rheumatoid arthritis, lupus, multiple sclerosis, insulin-dependent diabetes, inflammatory bowel disease, sympathetic ophthalmia, uveitis, allergy, asthma, parasitic infection, graff vs. host disease or psoriasis. A preferred gc blocking agent is MAB CP.BB or its Fab fragment (see also AAW31647-48).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Interleukin-2 receptor gamma chain; IL-2; receptor; immunoregulator;
rheumatoid arthritis; transplant rejection; primer;
polymerase chain reaction; PCR; amplification.
DNA and protein sequences of IL-2 gamma chain - useful as immune regulatory agents for treatment of e.g. rheumatoid arthritis and transplant rejection % \left( 1\right) =\left( 1\right) +\left(

Primers AAQ54826-27 are used to obtain the protein given in AAR47151.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The human II-2 receptor gamma chain preform (AAR47148), including the signal peptide, is encoded by the sequence given in AAQ54828. The mature protein (AAR47149) is encoded by sequence AAQ54829. A soluble form of II-2 receptor gamma chain (AAR47150) is encoded by AAQ54830, while a soluble form suitable for expression in prokaryotes (AAR47151) is encoded by AAQ54831. Primers 1-6 (AAQ54820-25) are based on the N-
                                                                                                                                                                                                                                                                    Interleukin-2 receptor gamma chain; IL-2; receptor; rheumatoid arthritis; transplant rejection; primer; polymerase chain reaction; PCR; amplification; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The human IL-2 receptor gamma chain preform (AAR47148), including the signal peptide, is encoded by the sequence given in AAQ54828. The mature protein (AAR47149) is encoded by sequence AAQ54829. A soluble form of IL-2 receptor gamma chain (AAR47150) is encoded by AAQ54830, while a soluble form suitable for expression in prokaryotes (AAR47151) is encoded by AAQ54831. Primers I-6 (AAQ54820-25) are based on the N-terminal sequence of IL-2 receptor gamma chain, and are used to isolate IL2 receptor gamma chain receptor DNA. Primers AAQ54826-27 are used to obtain the protein given in AAR47151.
                                                                                                                                                                                                                                                                   Interleukin-4; IL-4; gamma chain component; immunosuppressants; anti-allergy agent; signal transmission inhibitor; autoimmune; disease; anti-inflammatories; anaphylactic shock; bronchial asthma; interleukin-2; IL-2; atopic dermatitis; urticaria.

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence represents a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention and useful to regulate the immune response of an animal (e.g. by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 46; Page 210-212; 221pp; English.

The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 46;

1. SUBUNIT: THE GAMMA CHAIN IS COMMON TO THE IL-2, IL-4, IL-7 AND PROBABLY ALSO THE IL-13 RECEPTORS.

1. SUBCELLULAR LOCATION: Type I membrane protein.

1. DISEASE: DEFECTS IN ILLEG ARE THE CAUSE OF A SEVERE COMBINED IMMUNODEFICIENCY, WHICH IS KNOWN AS AGAMMAGLOBULINENIA, SWISS TY OR X-LINKED SEVERE COMBINED IMMUNODEFICIENCY DISEASE (XSCID).

1. SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

1. SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: INTERLEUKIN-13 RECEPTOR IS A COMPLEX OF IL4R-ALPHA, IL13R-ALPHA, AND POSSIBLY OTHER COMPONENTS (BY SIMILARITY). SUBCELLULAR LOCATION: Type I membrane protein. Type I Trombrane protein. TISSUE SPECIFICITY: SPLEEN, LIVER, THYMUS, HEART, LUNG, KIDNEY, TESTIS, STOMACH, BRAIN, SKIN, AND COLON: BUT NOT SKELETAL MUSCI SIMILARITY: CONTAINS I IMMUNGLOBULIN-LIKE C2-TYPE DOMAIN. SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

-i- FUNCTION: BINDS IL-13 WITH A LOW AFFINITY. TOGETHER WITH IL-4R-
ALPHA CAN FORM A FUNCTIONAL RECEPTOR FOR IL-13. ALSO SERVES AS AN
ALTERNATE ACCESSORY PROTEIN TO THE COMMON CYTOKINE RECEPTOR GAMMA
CHAIN FOR IL-4 SIGNALING, BUT CANNOT REPLACE THE FUNCTION OF
GAMMA-C IN ALLOWING ENHANCED IL-2 BINDING ACTIVITY.

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: UBIQUITOUS. HIGHEST LEVELS IN HEART, LIVER,
SKELETAL MUSCLE AND OVARY; LOWEST LEVELS IN BRAIN, LUNG AND
KIDNEY, ALSO FOUND IN B-CELLS, T-CELLS AND ENDOTHELIAL CELLS.
KIDNEY, ALSO FOUND IN B-CELLS, T-CELLS AND ENDOTHELIAL CELLS.
SIMILARITY: CONTAINS 1 IMMUNOSLOBULIN-LIKE C2-TYPE DOMAIN.
SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.
SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Q99656;

FUNCTION: HIGH AFFINITY RECEPTOR FOR INVERLEKIN-3, INTE AND GRANULOCYTE-MACROPHAGE COLONY-STIMULATING FACTOR.

SUBGNIT: HETERODIMER OF AN ALCHA AND A BETA CHAIN. THE B CHAIN IS COMMON TO THE IL-3, IL-5 AND GM-CSF RECEPTORS.

CHAIN IS COMMON TO THE IL-3, IL-5 AND GM-CSF RECEPTORS.

SUBCELLULAR LOCATION: Type I membrane protein.

SUBCELLULAR LOCATION: Type INFORMATION TYPE III-LIKE DOMAINS.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TTADEFLTTMPTDSLSVSTLPLPEVQCFVFNVEYMNCTW-NSSSEPQPTNLTLHYWYKNS
